New **Master of Science in Information Systems** Degree at Fogelman College

The Department of Business Information & Technology in the Fogelman College of Business & Economics at the University of Memphis announces its New Master of Science in Information Systems (MSIS) Degree. This program is designated a Science, Technology, Engineering and Math (STEM) program. International students who graduate from our MSIS program are eligible to apply with the federal government to work in the U.S. for 36 months – without corporate sponsorship – after graduation.

No organization today can survive without a strong BIT Group and IS professionals. Our MSIS degree is a designated Science, Technology, Engineering, and Math (STEM) program that prepares students to become business and systems analysts, data analysts, systems and application designers, technology project managers, and more. The curriculum core focuses on business analytics, systems design that both extracts and utilizes this business data, and the techniques that assure the effectiveness of the user working with such systems.

The U.S. Bureau of Labor Statistics reports that over the course of the next decade there will be a continued need for managers with technical skills. In the next two years alone, it is estimated that 1.2 million job openings will become available in STEM-related fields and, currently, there are not enough graduates to fill the roles.

Apply for the MS in Information Systems program today and "Power Up" your career!

Contact Ashley Holloway at ahollowy@memphis.edu or 901.678.3656 for more information about how to apply.
