We live in a complex, ever-changing, technology-reliant world. Companies are constantly looking for employees with the knowledge and skillsets to work with state-of-the-art hardware and software. Whether you are a seasoned industry professional or a student looking to earn an Information Systems specialization, the Software Testing Graduate Certificate offered through the University of Memphis is the best fit for you.

The Graduate Certificate in Software Testing is a four-course program that can be taken post-bachelor's degree, post-master's degree, or as part of a master's degree program. This program is designed to help you develop the skills necessary to handle critical and complex software. You will learn how to readily identify vulnerabilities in software, reduce glitches, improve user satisfaction, and prevent embarrassing field failures. The knowledge gained through this program will allow you to edge your competition and advance significantly both personally and professionally.
