The FedEx Institute Welcomes the Alternative Fuel Vehicle Conference

May 24, 2016 - The FedEx Institute of Technology will host the Alternative Fuel Vehicle Conference Tuesday, May 24, 2016. This conference, coordinated with 100 Best Fleets, brings together leaders in the logistics industry committed to alternative fuel implementations in fleet settings. 100 Best Fleets, currently in its sixteenth year, is a program that recognizes and rewards peak performing fleet operations in North America by encouraging ever-increasing levels of performance improvement within the fleet industry. As the national leader in logistics, Memphis is a city which recognizes that responsible management of fleets using the latest technology to improve the environmental quality is an important task. Dr. Steve Wayne of the University of Memphis serves as coordinator for this event.

The FedEx Institute is the premier high tech research institute in Memphis and the Mid-South. Our commitment to creating opportunities for advanced logistics research and networking opportunities is a critical element in positioning the FedEx Institute of Technology as a hub for technology research and development. Serving as the region's front door to all the scientific exploration, discovery and innovation happening at the University of Memphis, the Institute fuels groundbreaking interdisciplinary research, promote the development of emerging technologies, and foster unique collaborations with local companies, including the licensing of intellectual property, to help them and our community shape the future and stay on the cutting edge.
