

# 21 CD

Memphis, TN

A Residence for the 21st Century

ARCH 2712 Design 2 Studio

# INTRODUCTION

The following is a presentation of second-year architecture and interior design student projects from the Design 2 Studio. The projects were developed over seven weeks during the spring 2013 semester.

For this project, the eighteen students were asked to develop the design of a residence for the 21st century. To do this, students had to define 21st Century design and what it entails. Based on client input, students developed the program for the approximately 1500 square foot residence.

The 21st century is defined by prosperity, beauty, and restoration of the world. 21st century design was interpreted from this as healthy design decisions, form follows function, and sustainability.

In 21st century design the built environment is a filter of nature, not a barrier from it. As such, the design is considerate of context, environmentally conscious, efficiently priced, functionally focused, minimally ornamented, and informed and supported by nature.

The initial concept for the design was driven by the idea of traveling and all that it entails. When one visits a new place for vacation there are periods of travel in which a destination is sought. During that travel time there are experiences of exploration. Then when one gets to the destination in-depth exploration takes place where the majority of an experience is absorbed and enjoyed. That is what this design tries to achieve by emulating travel and explorative aspects.

21st Century Architecture is stripping away outdated inappropriate architectural values and going back to simply addressing human needs. In order to do this, one must provide shelter and comfort that is responsive to the climate as well as a shield to the elements. This process will apply the principles of critical regionalism and make use of local natural resources.

View of Arrival

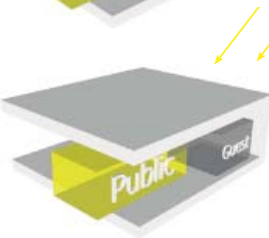

Using natural light as Louis Kahn has described - the "giver of presence" and the "source of all being" - to breathe life into a 21st century design.

The concept started by defining the programmatic areas and analyzing how much natural light they each needed.

Folding the plane in the Y direction diffused some of the direct sunlight.

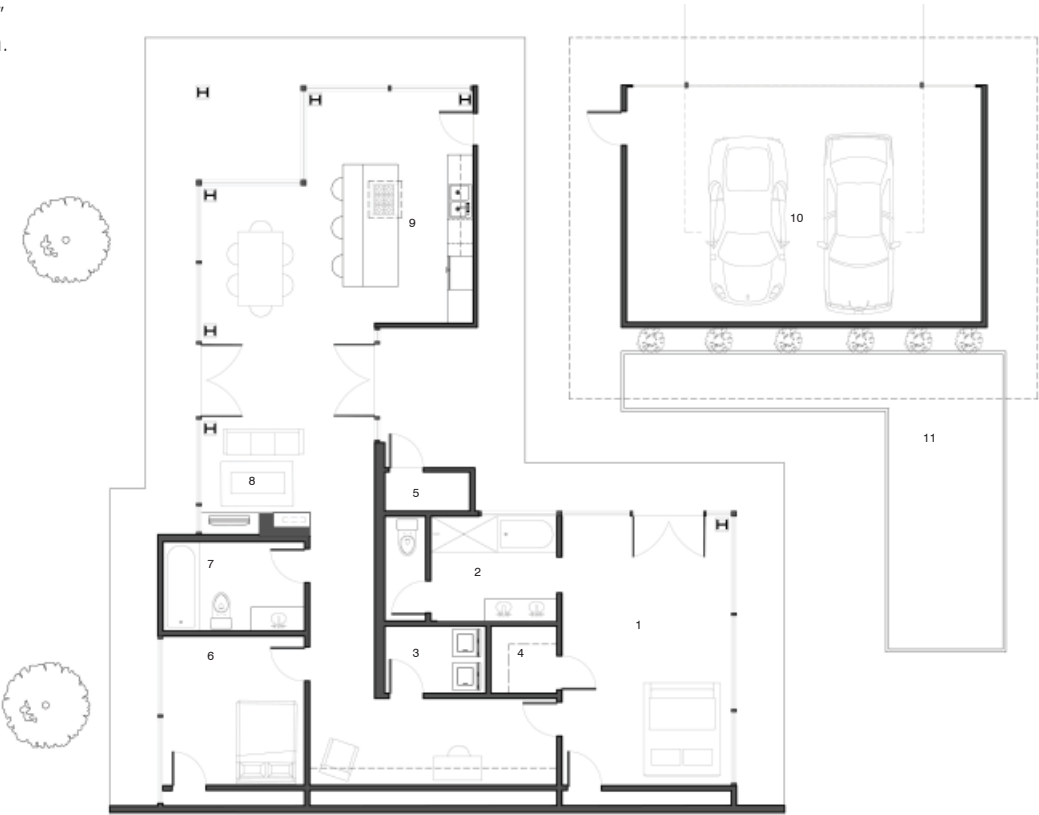

Folding the plane again allows for only desired areas to receive natural light.

21st century design: uses creative forms, provides experience, uses less, becomes one with nature, provides views, and creates interaction.

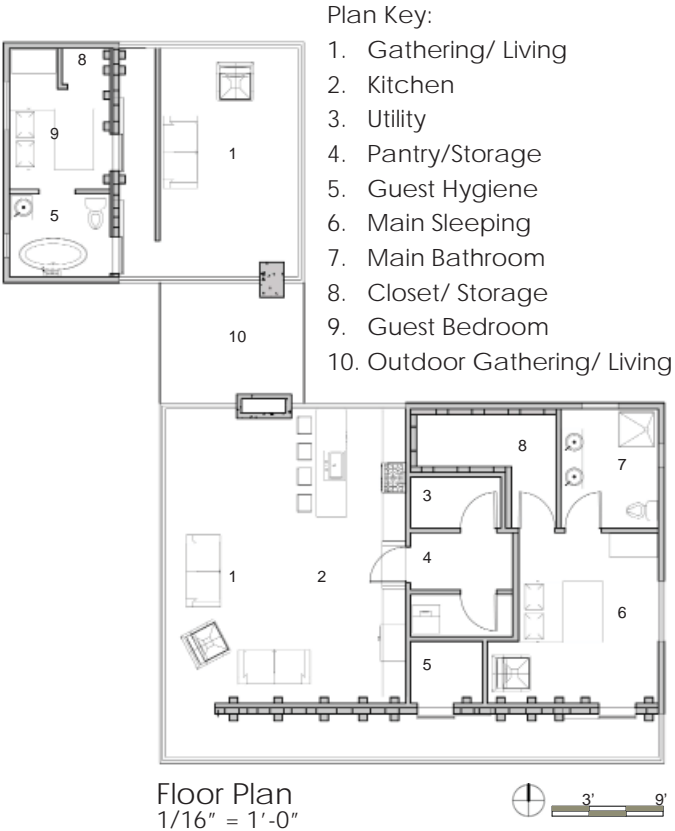

Exterior View of Residence

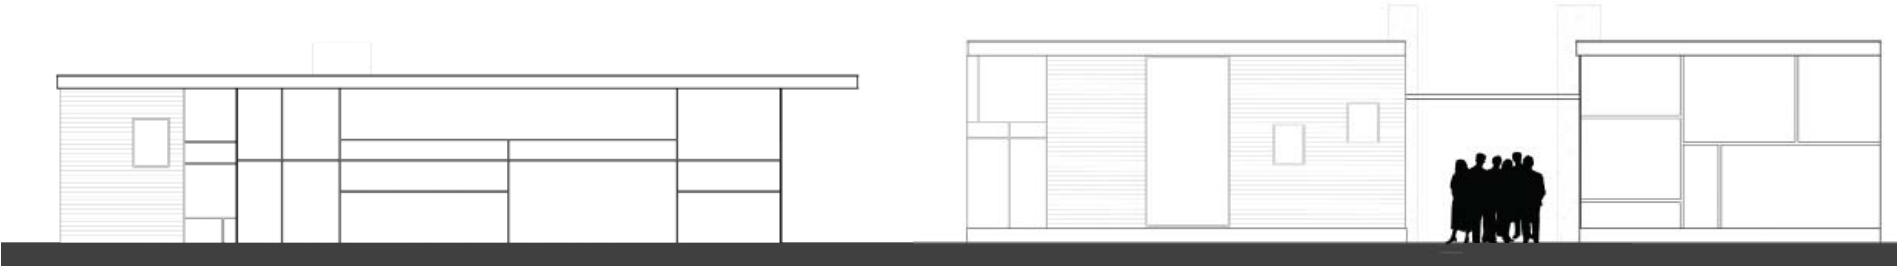

Creating spaces that are multipurpose was part of the design process. This allows for interaction or privacy when needed by creating public and private spaces.

21st Century Architecture has multiple uses for spaces and connection between the exterior and interior of the building; it is open, minimal, and not overly complicated; it is simple and straight-forward, where natural light plays an important role.

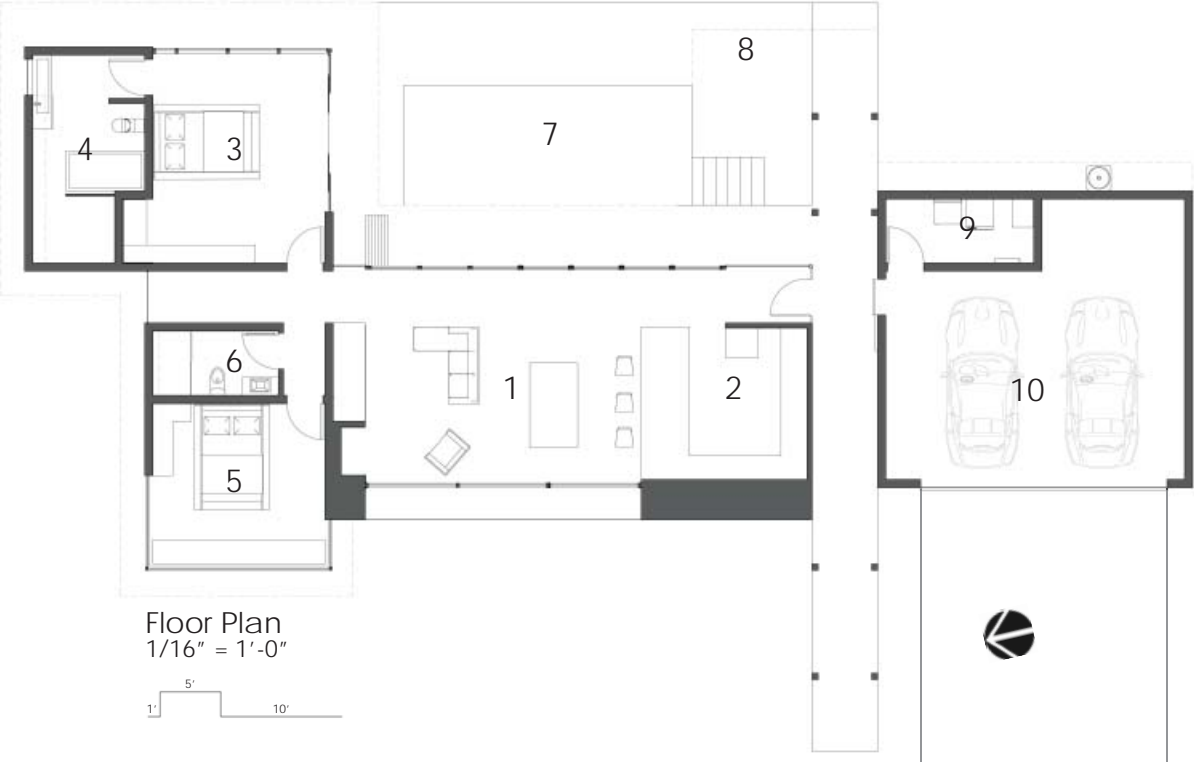

View of West Facade

The concept for 21CD is forging architecture and nature into one. Using natural materials and a neutral color palette, the residence blends in with the environment well. Opening the residence up to views of the site is a major priority as it allows the client to feel as though he is outside even when he is not. The open floor plan allows spaces to have multiple uses and the minimalistic styling allows nature to take main stage. Having views of the outside from one side of the residence to the other makes the building almost disappear and become one with the surroundings.

### The Idea of 21st Century Design

21st Century architecture does not have an identity. Through technology and use of materials, the current time period allows us to create what 21st century could become.

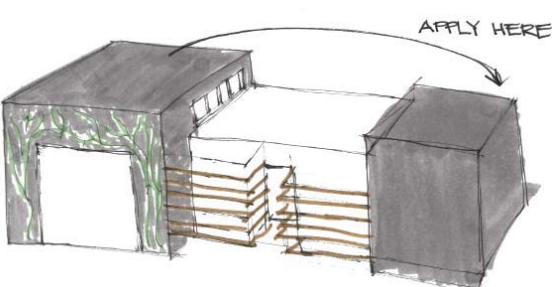

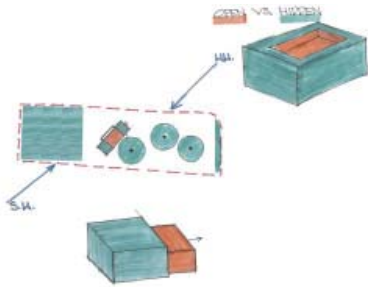

View of Entry

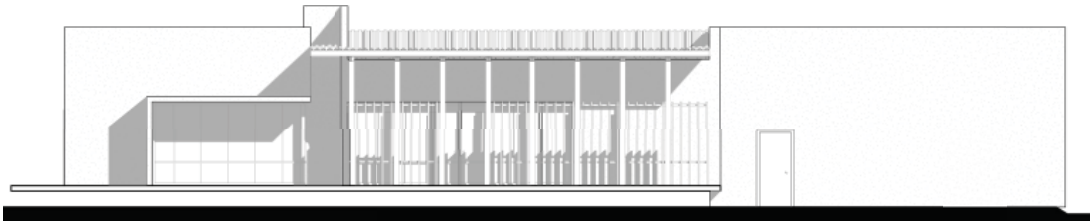

The program expressed the attraction for a 21st century design that would resemble seamless and hidden architecture. Considering the client's programmatic requests, beneficial information was obtained from Peter Zumthor's *Thinking Architecture*. Zumthor states, in the essay *Does Beauty Have Form*, that "The experience of beauty makes me aware of absence." I felt there was a strong connection between Zumthor's statement and what the client wanted in his design. I began to conceptualize ideas of how to create the seamless (beautiful) design by creating the open versus the hidden.

What is 21st Century design?

21st Century design is the constant attempt to regain a close connection to nature.

View of Entry Facade

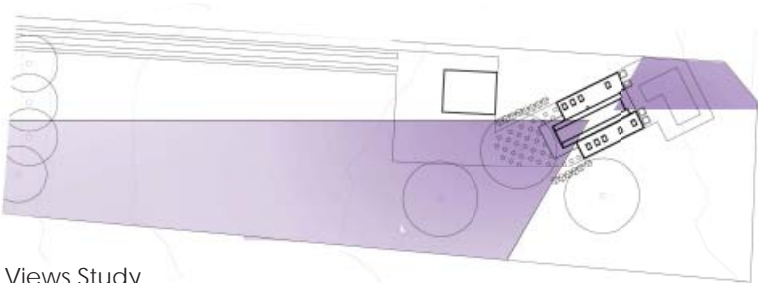

“A hand laying on the shoulder or thigh of another body no longer belongs completely to the one it come from: a new thing arises out of it and the object it touches or grasps, a thing that has no name and belongs to no one, and it is this new thing which has its own definite boundaries, that matters from that point on.”  
-Rainer Maria Rilke

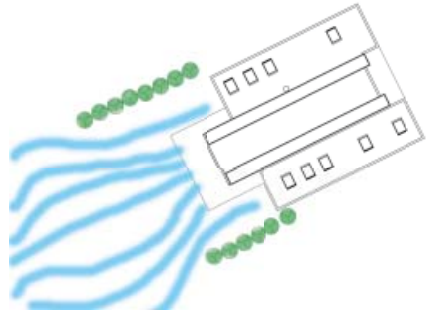

What are considered to be the hands in this project are the outside elements and how they are used to affect the experience of the inside.

As the outside relates to the hand, when the outside is placed within the inside body it is no longer just the outside, it is a new place with its own boundaries and experiences which connect the two.
