Economic Challenges Facing Black Men and Boys: Beyond the Data to Lived Experience

William R. Emmons

Center for Household Financial Stability (HFS)
Federal Reserve Bank of St. Louis

February 19, 2019

These views are mine alone and not necessarily those of the Federal Reserve Bank of St. Louis.
Economic Challenges: The Data

- **Part 1: Trends in family income and wealth**
  - Large and persistent gaps exist across race and ethnicity.
  - College does *not* level the playing field.

- **Part 2: Unique economic challenges facing African-American men and boys**
  - Raj Chetty’s research shows that black boys have more difficulty achieving and maintaining upward mobility than others.
  - Profound structural disadvantages include poverty and racial bias.
Part 1: The Demographics of Wealth Series

- HFS essay series links income, wealth and other socio-economic outcomes to a family’s:
  - Race/ethnicity
  - Education (own and parents’)
  - Age and birth year.

- Your race, education and birth year are strong predictors of your adult outcomes.

Black & Hispanic Income Gaps Closing Slowly

- Typical (median) income of black and Hispanic families has moved closer to that of white families but remains 40% lower.
- The typical “other-race” family (mostly Asian) has surpassed the typical white family’s income.

Median Real Income, Relative to Non-Hispanic White Families

Source: Federal Reserve Board's Survey of Consumer Finances.
Racial/Ethnic Wealth Gaps Are Very Large

Median Household Net Worth, by Race/Ethnicity of Respondent, 2016

Thousands of 2016 $

- Black-white wealth gap: -90%
- Black families (-90%)
- Hispanic families (-87%)
- Other families (-39%).

Source: Federal Reserve Board's Survey of Consumer Finances.
Note: "Other Races" includes Asians, Native Alaskans, Pacific Islanders, Native Americans, and families identifying with more than one race or ethnicity.
Racial/Ethnic Wealth Gaps Are Persistent

Median Real Net Worth, Relative to Non-Hispanic White Families

- Wealth of the typical black and Hispanic family has improved a bit since 1989, but the gaps remain close to 90 percent.
- Other nonwhite families’ wealth has increased faster than that of whites during the last decade.

Source: Federal Reserve Board's Survey of Consumer Finances.
Can Higher Education Close These Gaps?

- Our findings: College alone does not close the gaps.
  - The good news: A four-year college degree usually brings higher earnings and wealth accumulation for graduates of all races and ethnicities.
  - However, the income and wealth benefits of college are unequal across racial and ethnic groups.
  - College grads born in the 1970s and 1980s are earning somewhat less and accumulating much less wealth than older college grads—especially black and Hispanic grads.
Large Racial Wealth Gaps Also for College Grads

- A college degree brings greater median wealth for all groups.
- However, the racial wealth divide is almost as large among college-educated families.
- Four-year college degree narrows the black-white gap only from 89 to 83 percent.

Median Household Net Worth, by Race/Ethnicity and Education, 2016

Thousands of 2016 $

Black-white wealth gap, 4-year college: -83%
Black-white wealth gap, no college: -89%

Note: College grads include any family headed by someone with a four-year degree or higher.
Source: Federal Reserve Board's Survey of Consumer Finances.
Why Are Wealth Outcomes So Unequal?

- We conclude that structural, systemic or other unobservable factors related to race and ethnicity are very important sources of wealth inequality—it’s not just “bad individual choices” (Emmons & Ricketts 2017).

- Historical discrimination and disadvantage created large wealth gaps in the past, which continue to affect today’s adults and children because wealth is intergenerational.

- Continuing structural and systemic barriers make narrowing of income and wealth gaps very slow.
Part 2: Intergenerational (IG) Income Mobility

- Measure your parents’ income when you were a teenager.
- Measure your income in your 30s (20 years later).
- Two extreme cases:
  - Perfect IG income **mobility**: Your parents’ income doesn’t predict your adult income; everyone equally likely to end up rich or poor.
  - Perfect IG income **rigidity (no mobility)**: You end up exactly like your parents (you are poor if they were poor and vice versa).
- U.S. data: Somewhere in-between—some IG movement with important differences by race and location.
Raj Chetty (Harvard Economist) Has Best Dataset Ever Assembled for Studying IG Mobility

- Results reported in the *New York Times*, Mar. 19, 2018:

Why Has Black Upward Mobility Stalled?

- Low rate of upward IG mobility (doing better than your parents) among low-income black children.
  - Generational poverty

- Plus high risk of downward IG mobility (doing worse than your parents) among high-income black children.

- Chetty et al: “Black children continue to fall behind their white peers even if their parents catch up.” (p. 18)
The Main Fault Line: Black Boys vs. Girls

- Black girls are just as upwardly mobile as white girls with the same parental income.

- Black boys are not—they’re much more likely to earn incomes far below white boys even with the same parental income.

- Interesting fact: Black girls’ high-school completion and college-attendance rates are higher than those of white boys.
Large Regional and Neighborhood Variation in IG Mobility

- High IG income mobility for black children—especially boys—in some parts of the South, Northeast and West.

- Very poor outcomes for black boys in the industrialized cities of the Midwest—Chicago, Milwaukee, Cleveland.

- Black boys are especially vulnerable to “low-opportunity” neighborhoods, regardless of income.

- In general, Memphis is in-between—better than Chicago but not as good as New Orleans or parts of New York.

What Makes Chicago Neighborhoods So Much Worse than New Orleans for Black Boys?

- It’s not primarily due to individual “race-related shortcomings,” because black girls do much better than black boys (and white girls and boys, in some respects).

- It’s not primarily due to family structure or marriage rates because it’s share of neighborhood dads present that matters most, not presence of the child’s own dad.

- It’s not primarily due to environmental factors like school quality because black boys do worse even in good schools.
What Makes Chicago Neighborhoods So Much Worse than New Orleans for Black Boys?

According to Chetty, good outcomes are due to:

- **High fraction of fathers present in the neighborhood:** Dad in the house is good but many black dads in the neighborhood is even better.

- **Low levels of racial bias:** Racial hostility expressed by local whites hurts black boys and black girls more than Hispanic or Asian boys or girls.

- **Note:** White hatred hurts low-income whites, too.
What Makes Chicago Neighborhoods So Much Worse than New Orleans for Black Boys?

- Unfortunately, Chicago is more typical than New Orleans for most African-American children.
- It’s unusual to find neighborhoods containing many African-American families with all of these characteristics:
  - Low poverty
  - Many black fathers present
  - Low racial hostility from whites.
In Sum: Black Men and Boys Face Immense Economic Challenges But We Know What Helps

- Black-white income and wealth gaps are large and slow to change because of:
  - Cumulative discrimination and disadvantage: Structural racism.
  - Upward black intergenerational (i.e., parent-to-child) income and wealth mobility are low.

- Raj Chetty’s team believes the key to breaking out of this pattern is increasing the opportunities facing black boys.
Our Challenges

- How do we shield black boys from poverty and its effects when it is prevalent in so many neighborhoods?
- How do we increase the neighborhood presence of black dads?
- How do we decrease whites’ racial hostility, which harms both non-white and white Americans?
