

Fall 2018

COMP 4993/6993 Introduction to Data Science

Time: MW 5:30-6:55PM. **Location:** DH 103

Instructor: Vinhthuy Phan (vphan@memphis.edu)

Office: Dunn Hall 309. **Office Hours:** TBA

Course Description

COMP 4993/6993. A hands-on and programming-intensive introduction to data science and applications of data mining and machine learning techniques to analyze real data sets. Specific topics include data collection, cleaning, manipulation, and visualization, clustering and developing models to make predictions, and ethical aspects of data science. Prerequisites: COMP 2150, MATH 4614, or permission of instructor.

In this course, students will learn how to visualize and analyze real-world data. Examples include building models and tools to predict home prices based on available information (location, size, neighborhood, etc.), recommending movies based on a person's preference, predicting admissions into graduate schools, and many more.

Course Objectives:

- Students will understand fundamental data structures such as series and dataframes.
- Students will be able to manipulate dataframes with groupby.
- Students will be able to manipulate dataframes with pivoting.
- Students will be able to select data from dataframes.
- Students will be able to create charts to visualize numerical and categorical data.
- Students will be able to build models to cluster data using existing machine learning libraries.
- Students will be able to build regression models and make predictions using existing machine learning libraries.
- Students will be able to build classification models and make predictions using existing machine learning libraries.

Recommended Textbook:

Python for Data Analysis, 2nd Edition, 2017. by Wes McKinney, O'Reilly.

Grading:

COMP 4993

Attendance	10%
In-class exercises	30%
Homework assignments	30%
Project	30%

COMP 6993

Attendance	10%
In-class exercises	30%

Homework assignments	30%
Project	30% (*)

COMP 6993 students play a larger role in projects. COMP 6993 projects will be judged at a higher standard.

Grading scale:

A ≥ 94 A- ≥ 90 B+ ≥ 86 B ≥ 83 B- ≥ 80 C+ ≥ 76 C ≥ 73 C- ≥ 70 D+ ≥ 60 D ≥ 50 F < 50

Tentative agenda

1. GEM
2. Python, iterative patterns
3. Jupyter notebook
4. Dictionaries, CSV module
5. Series and Dataframes
6. Visualization of numerical and categorical data
7. Hierarchical clustering
8. K-means clustering
9. Linear regression
10. Logistic regression
11. Decision trees
12. Naïve Bayes
13. Support vector machine
14. Random forest

Academic misconduct:

- Plagiarism or cheating behavior in any form is unethical and detrimental to proper education and will not be tolerated. If plagiarism is found on a problem of an assignment/exam/project, a grade of 0 is given for that assignment/exam/project. A serious offense might also be reported to the appropriate authority in the department and university.
- Verbatim usage of code or writing is considered plagiarism.
- Superficial changes to a solution, piece of code or writing, is also considered plagiarism.
- Students must carry out the main tasks of an exercise, assignment, and project.
- If students need help on smaller, supportive parts of the main tasks, they must give credit and/or citation to collaborators and/or sources. If a piece of code or writing is used and not properly cited (to a classmate, collaborator or source), especially when it's implied that the entire or even partial work is your own, it is considered plagiarism.

Special accommodation:

If you need special accommodation, please let the instructor know immediately.
