

Graduate COMP Course Enrollment Instructions for Summer/Fall 2024

From the start of Summer/Fall 2024 registration through **Friday, April 19, 2024**, all graduate-level COMP courses will be **permit restricted**.

During this period, **only students enrolled in computer science graduate programs** (e.g., Computer Science M.S. and Ph.D.) will be issued permits.

Starting on **Saturday, April 20, 2024**, the **permit restrictions will be removed**, and students from non-CS programs will be able to enroll in or join the waitlists for graduate-level COMP courses.

The above process does not apply to the following courses:

- The courses reserved for Data Science M.S. students (see below for details).
- Non-conventional courses, like independent studies, project, thesis, dissertation, internship, etc. These courses are always permit restricted.

Instructions for CS Students

- To **request course permits**, complete and submit [THIS FORM](#) — **CS students only!**
- Note that, before you can register for classes, you must (as always) meet with your academic advisor to have your **registration pin** cleared, and you must have any **registration holds** on your account removed.
- It is strongly recommended that you complete these steps **as soon as possible**. Many graduate COMP courses fill up quickly.

Instructions for Non-CS Students

- Non-CS graduate students must wait until **Saturday, April 20** to enroll in graduate-level COMP courses. **No exceptions.**

Instructions for Data Science Master's (MSDS) Students

- For **Fall 2024**, these sections are reserved for MSDS students:
 - Database Systems – 96457 - COMP 7115 - 002
 - Fundamentals of Data Science – 96458 - COMP 7150 - 002
 - Machine Learning – 96063 - COMP 7745 - 002
- All of these sections will be permanently permit restricted.
- The **MSDS academic advisor** should provide instructions for how MSDS students can request a permit for these sections.
