

Employees should be able to verbally recall the following information (in simple language) about each hazardous material to which they are exposed during normal use or in a foreseeable emergency.

1. What are the requirements for informing and training employees?
2. What are the hazardous materials to which you are exposed during normal use or in a foreseeable emergency?
3. Where are these hazardous materials present?
4. What are the effects of these chemicals on the human body?
5. How is the presence or release of a hazardous material detected?
6. How can employees be protected from the effects of the hazardous materials?
7. Where are the Written Hazard Communication Program and Safety Data Sheets?
