

# APPLY TODAY:

## AI in Logistics Research Postdoc Position

The University of Memphis FedEx Institute of Technology in partnership with Green Mountain Technology has created a new postdoc opportunity that specifically addresses research on the applications of AI and machine learning in the logistics industry. The position will leverage data provided by Green Mountain Technology to solve real-world logistics challenges. Housed at the University of Memphis Research Park, this postdoc will be provided with access to University resources, faculty mentorship, professional teams in the logistics industry and opportunities to expand their professional experience.

The position is fully funded with benefits for two years.

### About Green Mountain

Green Mountain Technology partners with companies shipping 4 million parcels or more annually. Their Parcel Spend Management solution combines the best in class parcel invoice audit and payment automation capabilities with the resources and business model to become a strategic extension of customers' resources tasked with managing their parcel spend. We help companies manage their parcel spend in a world class fashion on a sustained basis. Green Mountain Technology brings a view of the market, analytical tools, resource bandwidth, and parcel expertise companies would not possess as one large parcel shipper. They help large companies manage their parcel spend at a level they could not reach on their own.
