

Title: Labor Impacts of Compliance, Safety and Accountability (CSA) on the Trucking Industry; Supply and Demand Issues for the Future

Description:

This project address critical risk management safety issues in the trucking industry with the implementation of CSA and examines the impact of the driver related issues concerning supply and demand in the trucking labor market resulting, in effect, in an impact analysis regarding implementation of CSA. 1) Research Performance: this applied research project will produce a product that provides summary information that is not available on strategies and alternatives responding to CSA to address labor supply and demand issues in the trucking industry. The information will be presented in a manner that promotes better decision-making at the management and policy level. 2) Research Selection: This project will provide concrete information analyzing data that addresses labor market supply and demand issues. 3) Education: Critical workforce shortages and other economic imperatives in the trucking industry can be addressed by evaluating solutions working to meet CSA issues. This will foster opportunities to provide coursework and experiential learning that will enhance the workforce in the trucking industry in coming decades. 4) Technology Transfer: This research will identify the alternatives that can be implemented, utilized or applied immediately in part or as a whole.
