

Title: Bridging the Gap Between the Public and Private Sectors with regards to Transportation Related Facilities Utilizing the Concept of Public-Private Partnerships

Abstract:

In the prevailing economic times, cash flow for government agencies is becoming increasingly difficult to come by, as such governmental agencies are unable to build, operate and maintain transportation facilities. In a bid to counter this unfortunate situation, there has been a concerted effort to engage the private sector in the financing and management of public infrastructure. This has led to an increase in public-private partnerships or PPPs. Thus the purpose of this dissertation is to find an innovative way in which this would be possible utilizing the requisite tools such as models, case-studies and research already completed.
