Invited Participants:	
Meeting Leader(s):	Timothy Cureton
Location:	Online (TEAMS)
Topic:	ISAC Meeting
Meeting Objective(s):	Agenda items

Meeting Notes/Updates:

A. CIO Search Committee

- The candidate pool for the CIO Search will be virtual interviews and then the Search Committee is going to be selecting out of three to four people to come and have in-person interviews on campus. After the in-person interviews, they would forward the names of those candidates to Doctor Hardgrave for review.

B. IT Security Training Update

- Required ITS security awareness training began October 1 and ends February 28, 2024. Last week, emails were sent to everyone who needed to complete the training. Starting with this training period, users taking the refresh course can test out of the training. After a brief introduction video, they can take a five-question quiz, and users scoring 80% or more do not need to finish the rest of this year's course.

C. Phishing Emails Alert

- Phishing emails are attempts by scammers to gain access to your account, get your personal info, or trick you into sending money. Information Technology Services (ITS) is providing the following information to warn against phishing threats targeting UofM students. Please take note of the following steps to avoid falling victim to an attack.
- Timothy's team finished their phishing simulation campaign in September and the university had about a 16% failure rate in this was for the entire campus of faculty, staff, and student workers.

D. Chris Renfrow- Web and Mobile Services

- **umWiki**

Chris's team has been working to replace their existing umWiki software which is Confluence, and it will be going away in December because the vendor Atlassian changed their licensing structure. The new licensing model will not have unlimited licensing for all faculty, staff, and students.

- **BookStack**

BookStack has been launched and is available for faculty, staff, and students. Chris's team is in the process of working on migrating confluence spaces into the BookStack. 100 spaces have been migrated, which equates to about 6000 pages.

E. Informatica Software

- Data Services is currently working on a new upcoming project for ITS and will be implementing the Informatica Software. This software is called the master data manager, with the University moving towards having two ERP systems- the Sri System and the ERP System for faculty and staff. This is for HR purposes and will need a way to reconcile data between those two systems and make sure that there's a single authoritative record for the lpass which is a way to integrate the platform as a surface as a service.

F. Reminder- Normal Patching

- All desktops have been updated and rebooted. There were also services for different IT systems that were patched as well as some systems that were bouncing. More information and updates will be provided.

Meeting Adjourned.
