

Autism, Behavior, & Communication (ABC) Program

A new, intensive, co-treatment program at the Memphis Speech and Hearing Center for preschool-aged children with communication disorders associated with autism.

Description:

Specialists in speech-language pathology and behavior analysis work with your child for three hours, three times per week, in both group and individualized sessions. This unique co-treatment model blends the expertise of two professions that address the communication and behavior needs of children with autism.

The favorable ratio (1 licensed professional: 4 children: 4 to 6 graduate clinicians) means that your child will receive a minimum of one-on-one treatment at all times and will receive both speech-language and behavior services at the same time. Treatment and goals are individualized to the child's and family's needs.
