Purpose

Duo Account Security or two-factor authentication adds a second layer of security to your online accounts. Verifying your identity using a second factor (like your phone or other mobile device) prevents anyone but you from logging in, even if they know your password.

Audience

This training material is designed for University staff, faculty and students that will be accessing any of the UofM’s enterprise applications through Single Sign On (SSO).
iAM Duo Account Security

Setting up Duo Account Security

1. Navigate to the iAm Identity Management site. Log in with your UUID and Password. Click Login. Note: If you cannot log into iAm, you will need to contact the Service Desk.
2. Select Duo Account Security

3. Choose from the available selection the type of device to add. You will select from mobile phone, tablet, or land line. Click Continue.
Installing on a Mobile Phone

Note: DUO will not allow clients to use callback or SMS texting in Spring 2022. New DUO clients may not have this feature enabled.

1. If choosing mobile phone, enter your mobile number. Click Continue.

   Note: If adding a device with a non-U.S. number, enter your full phone number, starting with the country code, as digits only—no spaces or dashes (+Country Code/City Code/Number). If you experience any issues using Duo with your mobile phone, follow the instructions on page 10 to add the device as a tablet.

2. Select the type of mobile phone. Click Continue.
3. Download the Duo Mobile App from the App Store for an iPhone/iPad or in Google Play for android or tablet. Install to the app. **Note:** The DUO application may be restricted in some international countries and the client will need to download the DUO Mobile APK App directly from DUO website.

4. Tap “OK” when asked if Duo Mobile should be able to send push notifications. If you have installed the app click the I have Duo Mobile button.
5. Once the Application has installed, launch the Duo Mobile app. Tap the “+” button, then under Add Account, click Use QR code. Scan the barcode, then click Continue. You can use the Default Name, University of Memphis, click Done.

Note: if you do not see the barcode click “I am unable to scan the barcode above” this will reveal an activation link from your device.
6. Once the barcode has been scanned, you are ready to use Duo Account Security. The next time that you log into the SSO system with your UUID and Password, you will also be prompted to authenticate with your phone. From this screen, select **Send me a push** in order to have a notification sent to your phone. You may also check the box beside **Remember me for 7 days** if you want the system to bypass Duo Authentication for the next week (this is device specific). The browser cookie settings must be set to allow local data to be set. See instructions for each browser located on page 19.
7. Once the push has been sent, you will receive a notification on your phone.

8. Next, launch the Duo Mobile app. A message from the Duo App will ask if you are logging in to UofM Single Sign-On? Tap **Approve** and access to the system will be granted.
Installing on a Tablet

*Note:* This method is also recommended for non-tablet mobile devices with international phone numbers that are experiencing issues using Duo.

1. Click to select **Duo Account Security**.

2. Choose from the available selection the type of device to add. Select **Tablet**. Click **Continue**.
7. Download the Duo Mobile App from the App Store for an iPhone/iPad or in Google Play for android or tablet. Tap get and then install to download the app. **Note:** The DUO application may be restricted in some international countries and the client will need to download the DUO Mobile APK App directly from DUO website.

3. Tap OK when asked if Duo Mobile should be able to send push notifications. If you have installed the app click the I have Duo Mobile button.
4. Once the Application has installed, open the Duo Mobile app. Next, launch the Duo Mobile app. Tap the "+" button, then under Add Account, click Use QR code. Scan the barcode, then click Continue. You can use the Default Name, University of Memphis, click Done. Note: if you do not see the barcode click “I am unable to scan the barcode above” this will reveal an activation link from your device. Click Continue.

5. Once the barcode has been scanned, you are ready to use Duo Account Security. The next time that you log into the SSO system with your UUID and Password, you will also be prompted to authenticate with your phone. From this screen, select Send me a Push in order to have a notification sent to your phone. You may also check the box beside Remember me for 7 days if you want the system to bypass Duo Authentication for the next week (this is device specific). The browser cookie settings must be set to allow local data to be set. See detailed instructions for each browser.
6. Once the push has been sent you will receive a notification on your tablet.
7. Next, launch the Duo Mobile app. A message from the Duo App will ask if you are logging in to UofM Single Sign On? Tap Approve and access to the system will be granted.
Using a Landline (Home Phone, Desk Phone, etc.)

**Note:** This Feature is only available for UofM Faculty and Staff. If adding a device with a non-U.S. number, enter your full phone number, starting with the country code, as digits only—no spaces or dashes (+Country Code/City Code/Number).

1. Click to select Duo Account Security

![Duo Account Security](image1)

2. Choose from the available selection the type of device to add. Select Landline (Home phone, Desk phone, etc.). Click Continue.

![Duo Account Security](image2)

3. The system will then call the telephone line. You will hear a brief message and will be prompted to hit any key on the phone for access. **Note:** Please avoid selecting “text me new codes as this also invalidates the previous code.”
DUO Token

What is a DUO Token? The DUO token is a small, thumb-sized device that generates 6-digit codes or tokens to be used during DUO sign-on. DUO tokens can be used to generate a code or token when an individual has no usable phone options or if traveling internationally. The token will need to be kept near or on the person to whom it is assigned, as it will be needed whenever you attempt to login and authenticate to secure sites at the UofM with DUO.

The device requires no internet connection, no phone number, and is suitable for situations where the mobile app or phone cannot be used, such as in secure areas or when traveling. Note: Each time you press the green button on your Duo Token, it invalidates the previous code.

DUO tokens must be assigned to specific user accounts and cannot be shared. For faculty and staff, a DUO token can be requested via the following Service Desk form. DUO tokens are available for $20 and can be charged to a departmental index #. Tokens that are lost or damaged are subject to a $20 replacement fee. Students can order a DUO Token on this web page. Following the process below should allow you to successfully Authenticate utilizing your assigned Duo Token.

Acquiring and Using a DUO Token

1. Fill out a DUO token request using the appropriate Service Desk form. (Note: see above paragraph)
2. You will receive an email saying your token is ready and the location for picking up your DUO token. Pick up your DUO token.
3. Whenever you attempt to login a system protected by DUO, press green button and enter token number on token when prompted by DUO for authentication.

Note: See also our Infographic about using the DUO token.
Using the Duo Mobile Application in location with poor cell coverage or no WIFI

You can use the Duo Mobile app to generate a passcode to use as a second factor.

1. To generate a one-time passcode, open the app and tap the green key icon next to "University of Memphis".

2. The app will generate a one-time passcode to enter at time of log in.
3. The next time that you log into the SSO system with your UUID and Password, you will also be prompted to authenticate.

4. Click on the **Enter a Bypass Code**, then enter one-time passcode.

Once you have entered the one-time passcode bypass code, click **log in**.
How to enable cookies in Chrome, Firefox, IE, Opera or Safari

From Chrome

Step 1: Open settings — With Google Chrome open, click the Chrome menu icon represented by three horizontal bars or 3 small dots in the upper-right corner of the browser window. Next, click the Settings option from the menu. Next click the Show Advanced Settings option at the bottom of the page, followed by the gray Content Settings button located beneath the Privacy section.

Step 2: Enable cookies — Check the radial selection directly left of the Allow Local Data to be Set option near the top of the resulting pop-up window to enable browser cookies. Click the Done button in the bottom-right corner when finished. Close the settings tab.
From Firefox

**Step 1: Open settings** — Open Mozilla Firefox, click the menu icon in the upper-right corner of the browser window represented by three horizontal bars and select *Preferences* from the right side of the resulting drop-down menu. Afterward, click the masked Privacy tab located to the left side of the window and select the *Use Custom Settings for History* option in the drop-down menu of the panel’s History section.

![Firefox settings](image)

**Step 2: Enable cookies** — Check the box directly left of the *Accept Cookies from Sites* option near the middle of the History section to enable browser cookies. Use the drop-down menu beneath the checkbox to ensure *Accept Third-party Cookies* is set to *Always*.

![Firefox cookie settings](image)
From Internet Explorer/Edge

**Step 1: Open settings** — Launch Internet Explorer/Edge, click the Tools menu icon represented by the cog in the upper-right corner of the browser window, and select *Internet Options* near the bottom of the resulting drop-down menu. Then, click the Privacy tab located in the top navigation bar.

![Internet Options window](image)

**Step 2: Enable cookies** — Move the slider within the Settings section of the Privacy tab all the way to the bottom to accept all browser cookies. Then, click the gray *Advanced* button near the bottom of the slider and check the box directly left of the *Override Automatic Cookie Handling* option to access first and third-party cookie blocking. Click the gray *OK* button located at the bottom of the window when finished.

![Advanced Privacy Settings window](image)
From Safari

Step 1: Navigate the settings panel — Launch Safari, click Safari in upper-left corner of the main menu bar, and select the Preferences option near the top of the drop-down menu. Afterward, click the silhouetted Privacy tab located in the top navigation bar.

Step 2: Enable cookies — Check the radial click beside the Always Allow option located directly right of Cookies and Website Data to enable browser cookies. Click the Close button in the top-left corner when finished.
Why Do I Need This?

Passwords are increasingly easy to compromise. They can often be stolen, guessed, or hacked — you might not even know someone is accessing your account.

Two-factor authentication adds a second layer of security, keeping your account secure even if your password is compromised. With Duo, you'll be alerted right away (on your phone) if someone is trying to login as you.

This second factor of authentication is separate and independent from your username and password — Duo never sees your password.

I need to reactivate Duo Mobile.

When using DUO on a mobile device, if you change your device, you will need to register it in DUO. Log into IAM and deactivate the old device and activate the new one.

Here are the steps:

1. Log into IAM — [https://iam.memphis.edu/](https://iam.memphis.edu/)
3. You will see a list of devices and phone numbers, select the device to **Reset/Reactivate** or press the **Delete** button to delete the device.

![DUO Account Security](image)

4. Select the device to **Reset/Reactivate**. Click on **Reset/Reactivate** and follow the onscreen steps. You now have Reset/Reactivated your device.
I have stopped receiving push notifications on Duo Mobile.

You may have trouble receiving push requests if there are network issues between your phone and our service. Many phones have trouble determining whether to use the Wi-Fi or cellular data channel when checking for push requests, and simply turning the phone to airplane mode and back to normal operating mode again often resolves this sort of issues, if there is a reliable internet connection available. Similarly, the issue may be resolved by turning off the Wi-Fi connection on your device and using the cellular data connection.

Check the time and date on your phone and make sure they are correct. If the date and time on your phone are manually set, try changing your device’s configuration to sync date and time automatically with the network.

If neither of these suggestions work, you can login to iAM, remove your device — provided you have a backup — and re-activate Duo Mobile.

I lost my phone.

If you have lost your phone, please contact the ITS Service Desk at 901.678.8888 or by email at umtech@memphis.edu.

I have an international number and am having trouble using DUO.

For mobile devices with international phone numbers that are having trouble using Duo, follow the instructions on page 10 to add your device as a tablet. International phone numbers should be entered in the correct format: The plus sign (+) followed by the country code and full number with no spaces or dashes. Example: +911234567890.

My hardware token stopped working.

Your token can get "out of sync" if the button is pressed too many times in a row and the generated passcodes aren't used for login. In some cases, this can happen by accident if the token is stored next to other objects in a pocket, backpack, etc. Tokens can typically be re-synchronized by attempting to authenticate using three consecutively generated passcodes.

Contact the ITS Service Desk if your token stops working or if you can't log in with the passcodes it generates.
I received an authentication notification that I did not request. What should I do?

An un-requested authentication attempt might be an indication of fraudulent activity, or it could be a service configured to automatically log in, such as a computer logged in overnight.

If you believe the request is fraudulent, reject the push notification and change your credentials.

I am not able to install Duo Mobile.

The minimum supported operating system version for Duo Mobile 3.1.0 and above is iOS 6.0. Users installing Duo Mobile for the first time with devices running pre-iOS 6.0 need to download Duo Mobile from the App Store using the iTunes application on a Mac or PC computer. You must be signed in with the same iTunes account you plan to use with your phone.

When the download is complete, open the App Store on your pre-iOS 6.0 device, and install Duo Mobile. You will be prompted with an alert informing you will receive the latest compatible version of Duo Mobile (v3.0.2).

Contact the ITS Service Desk if further assistance is required.

Supported Devices

Click your device to learn more:

- iPhone & iPad
- Android
- Cell Phones & Landlines
- Hardware Token
Locating Help Resources

umTech offers support to faculty, staff, and students. Upon completing the training covered in this course, faculty, staff, and students can receive additional training help and resources. Such help can be located as follows:

Service Desk Request

Submitting a Ticket

- Login URL:
  - Here is a link to our service desk ticketing system
  - After logging in, choose the link Request Help or Services.
  - Choose Request Help or Services.

Call the ITS Service Desk (901.678.8888) any day of the week! (Excluding Some Holidays)

- The ITS Service Desk hours will be as follows:
  - Monday - Friday 8:00 am - 8:00 pm
  - Saturday 10:00 am - 2:00 pm
  - Sunday 1:00 pm - 5:00 pm
- You can contact the Service Desk for assistance with technical login problems or issues. Incoming calls after hours will be handled by voicemail services. If you require assistance after 8:00 p.m., please leave a message or submit a service request.
- Messages will be checked regularly and receive priority response the following business day. You may also email umTech, umtech@memphis.edu (using this email will automatically generate a help desk ticket).
